**Subject:** Plans for River Monitoring

Hi all,

We are in our second week of monitoring the regular river water and sediment locations once per week. The LTMP is being worked on but not developed yet.

What are you all doing for river sampling in the interim? The guidance to me on how long to continue weekly sampling was unclear.

In the ICP we were thinking about sticking with weekly while operations at the GKM are continuing – projected til week of 19 or 26 October when the interim treatment system is on line. Then transition to the LTMP, even if there is a gap.

Thanks,

Mike
